

# BE PART OF THE ENERGY REVOLUTION

The UKA Group is an international wind and solar energy developer with 880 employees. With more than 60 constructed wind farms and 1.2 gigawatts in the permitting process, UKA is one of Germany's leading onshore developers. As a full-service provider, UKA offers turnkey services from greenfield development to construction. The UKA Group's international project pipeline for wind and solar projects comprises more than 14 gigawatts. Our dedicated teams in Chile, Spain, Poland and the U.S develop promising renewable energy projects and hence advance the global transition towards clean and affordable energy solutions.

## LOCATION SANTIAGO DE CHILE

Starting immediately  
or as agreed

A company is only as good as its employees. That's why we don't care about sex, skin colour, religion or background. When it comes to being able to succeed in the renewable energy industry of the future, we are exclusively concerned with commitment and competence. As a team member, you can expect challenging and future-oriented jobs, appreciation for your teamwork and performance-related compensation.

Please submit a complete application, along with your availability and salary expectations.

## ENVIRONMENTAL SPECIALIST

### THE ROLE:

- Plans, coordinates, and conducts environmental studies and projects, including monitoring work quality, budget, schedule, and compliance with environmental specifications, rules, regulations, and laws
- Experience with the development and implementation of environmental strategies, policies, and procedures for energy projects in their various phases, from pre-feasibility to construction and/or operation.
- Work on updating and implementing the company's environmental policies.
- Coordinate the application and obtaining of all kinds of environmental permits and sectoral permits
- Serves as an advisor and consultant to management and staff on technical matters relative to environmental assessment functions.
- Ensure compliance with current environmental regulations at the national and international level (IFC, Equator Principles, etc.)
- Review and validate technical documents issued by environmental consultants/specialists (for example: chapters for the entry of DIA or EIA, PAS, etc.)
- Coordinate and work closely with internal cross-functional resources, work with outside consultants, and assist with liaising with governmental agencies on the siting, licensing, and permitting issues of renewable energy projects
- Prepare detailed internal reports and provide support for preparing permits, regulatory reports, and other compliance submittals

### THE INDIVIDUAL:

- Higher education and preferred majors in natural resources management, environmental engineering, environmental protection, or related fields.
- Demonstrated experience and skills in undertaking environmental assessments, including screening, scoping, risk assessment, developing plans and supporting action plan implementation, monitoring, and reporting.
- Minimum 3–5 years of progressively responsible experience in an environmental, regulatory, or environmental
- Business proficiency in Spanish and English. Additional third languages such as German or Portuguese are a plus.
- Previous experience in permitting energy development projects is required
- Must be proficient in Microsoft: Word, Excel, and Outlook.
- Openness to business travel
- Driver's License, category B
